

ALCORE

CARDBOARD PACKAGING

«Alcore» is the company, founded in 2005 and successfully developing in the area of cardboard packaging. Since its inception, Alcore has produced a regular cardboard tube winding with a small range of sizes, and has not stood out among other manufacturers in Ukraine.

But the growing market demand for quality and specific tube windings, together with a constant desire for improvement, has led us to expand the range of cardboard tubes, improve their quality and production with new properties. This was facilitated by close and constant cooperation with manufacturers of materials and equipment required for the production of the cardboard tubes, which made us the exclusive distributor of the Belgian company EOS Group in Ukraine.

Now our tubes are used not only in the traditional fields of production, where the winding or packaging of various materials is required, but also in the metallurgical, mining, construction industry. The company faces new challenges of modern realities and we hope that we will, as always, successfully cope with them.

ALCORE

---

Cardboard tubes (spools, bushings, cartridges) are traditionally used for winding various roll materials and as cylindrical containers for the packaging of bulk food and non-food products. We use raw materials specially designed exclusively for the production of cardboard tubes.

**ALCORE PRODUCES CARDBOARD SLEEVES  
OF THE FOLLOWING DIMENSIONS:**

- inner diameter, mm: 28 - 600
- thickness, mm: 1 - 15
- length, mm: from 50 mm  
(on request up to 12000 mm)

WATER-RESISTANT TUBES USED FOR THE  
MANUFACTURE OF HOLLOW CONCRETE FLOORS

Cardboard disposable formwork for columns is made by the method of multilayer spiral winding on a special basis. In the manufacturing process, the cardboard is impregnated with a special adhesive to give the formwork strength.

- rapid assembly / disassembly
- light weight, at the same strength
- is installed without the help of a crane
- lightweight and reliable
- cheap to use
- gives excellent quality to the concrete surface

**ALCORE PRODUCES CARDBOARD DISPOSABLE FORMWORK OF THE FOLLOWING DIMENSIONS:**

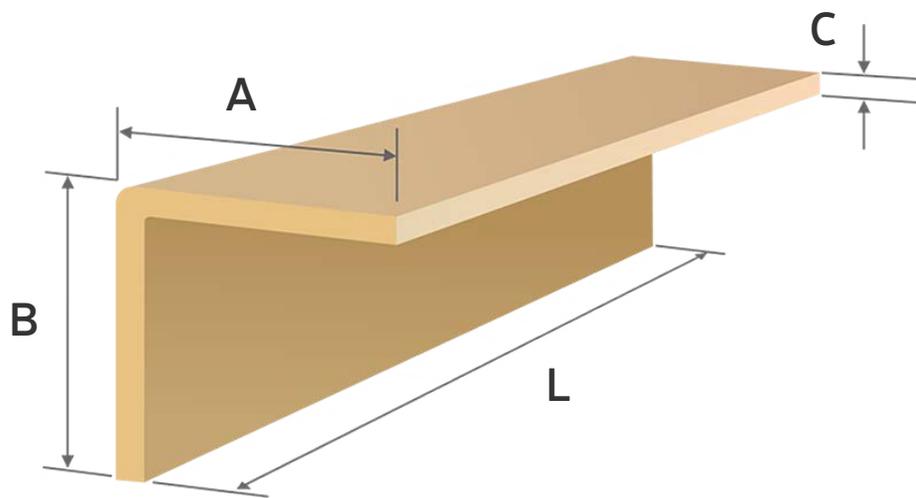

- thickness, mm: 5 - 15
- inner diameter, mm: 100 - 600
- height, mm: standard - 3000  
(on request up to 11000 mm)

Cardboard protective corners are made of quality imported cardboard, that is specially designed for its production and differs from other characteristics in its durability.

The products are manufactured by skilled workers on the modern high-tech equipment of EBERLE S.A. (France). Cardboard corners are made by technology using special glue, as well as sequential pressing and molding, which gives the product a special resistance to shock and compression.

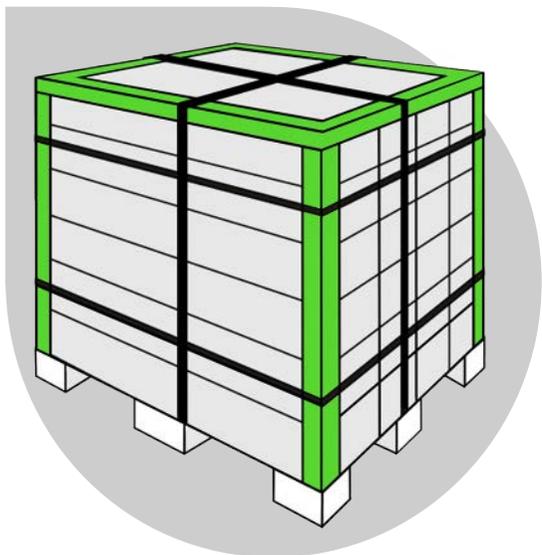

### CARDBOARD CORNERS ARE MADE IN THE FOLLOWING SIZES:

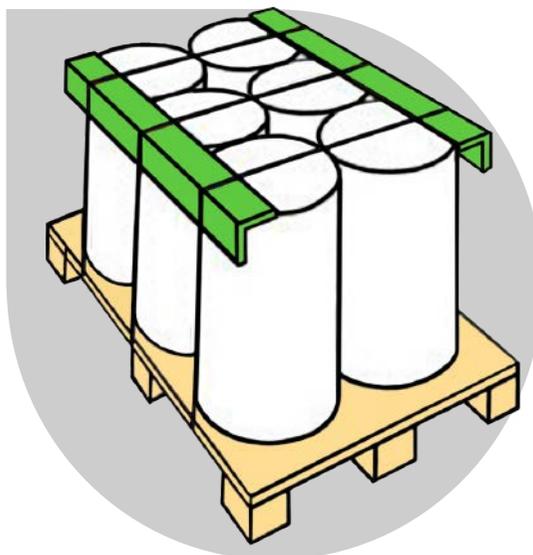

A, B 30 - 100 mm  
C 2 - 10 mm  
L from 50 mm  
(on request up to 6000 mm)
